

How to install django from scratch in venv

<https://docs.djangoproject.com/en/3.2/howto/windows/>

django cheatsheet

<https://github.com/lucrae/django-cheat-sheet>

Install python

1.2.2 Installing Pip 10.0.1

To install pip you must first download the get_pip.py which can be found here . Next open your favorite terminal and run the following :

```
>> python get_pip.py
```

1.2.3 Installing Django 2.0.2

After pip is installed you can simply type :

```
>> pip install django
```

1.3 Creating the project

1.3.1 Generating the necessary files

From the command line, cd into a directory where you'd like to store your code, then run the following command :

```
>> django-admin startproject project_name
```

Creating the website app

To create the app we need to be in the same directory as manage.py. Executing this command :

```
>> python manage.py startapp App_Name
```

1.4.5 Adding our models to the database

Now that we've written our models we have to migrate them into our database. We can achieve this by running the following commands:

```
>> python manage.py makemigrations website
```

Now, run migrate again to create those model tables in your database:

```
>> python manage.py migrate
```

1.5.1 Creating an admin user:

First we'll need to create a user who can login to the admin site. Run the following command:

```
>> python manage.py createsuperuser
```

Create Virtual Environment:

1. `cd C:\Users\user\Desktop\UserDjangoProject> pip install virtualenv`(If already not installed)
2. For Create a venv run this : `virtualenv -p python3 myenv` * or `virtualenv myenv*`
3. Activate virtualenv: `myenv \Scripts\activate`
4. It will look like this : `(myenv)`
`C:\Users\user\Desktop\UserDjangoProject>`
5. Then run : `pip install -r requirements.txt`
6. Run the django project run this: `./manage.py runserver`
* `myenv` is name you give to your virtual environment

Create requirement.txt file in virtual Environment:

```
pip freeze > requirements.txt
```
